**GENERAL CHEMISTRY 2  
FIRST EXAM (Sample)**

**Name** \_\_\_\_\_ **KEY** \_\_\_\_\_

**Panthersoft ID** \_\_\_\_\_

**Signature** \_\_\_\_\_

**Part 1** \_\_\_\_\_ **(24 points)**

**Part 2** \_\_\_\_\_ **(44 points)**

**Part 3** \_\_\_\_\_ **(32 points)**

**TOTAL** \_\_\_\_\_ **(100 points)**

**Do all of the following problems. Show your work.**

**Part 1. Multiple choice.** Circle the letter corresponding to the correct answer. There is one and only one correct answer per problem. [4 points each]

1) Which of the following states of matter is classified as a fluid?

- a) The solid state
- b) The liquid state
- E** c) The gas state
- d) Both a and b
- e) Both b and c

2) 10.0 grams of glucose (MW = 180.2 g/mol), 40.0 g of isopropyl alcohol (MW = 60.1 g/mol), and 400.0 g of water (MW = 18.0 g/mol) are mixed together to form a solution. We may say

- a) water is the solvent in the above solution
- b) glucose is the solvent in the above solution
- A** c) isopropyl alcohol is the solvent in the above solution
- d) both glucose and isopropyl alcohol are solvents in the above solution
- e) none of the components of the solution can be considered a solvent

3) A solution is prepared by dissolving 20.0 g of naphthalene (a non-volatile solute) in 150.0 g of benzene (a volatile solvent). Which of the following statements about this solution is correct?

- a) The normal boiling point of the solution is higher than the normal boiling point of pure benzene
- b) The normal boiling point of the solution is lower than the normal boiling point of pure benzene
- A** c) The normal freezing point of the solution is higher than the normal freezing point of pure benzene
- d) Both a and c
- e) Both b and c

4) For a chemical reaction to be spontaneous which of the following must be true?

- a)  $\Delta S_{\text{sys}} > 0$
- b)  $\Delta S_{\text{surr}} > 0$
- C** c)  $\Delta S_{\text{univ}} > 0$
- d) Both a and b
- e) Both a and b and c

5) For 1.000 mol of which of the following substances will  $S^\circ$ , the absolute entropy, be exactly zero at  $T = 25.^\circ\text{C}$ ?

- a) Cu(s)
- b) O<sub>2</sub>(g)
- E** c) O<sub>3</sub>(g)
- d) Both a and b
- e) None of the above

6) For a particular chemical reaction we find that  $\Delta H^\circ_{\text{rxn}} < 0$  and  $\Delta S^\circ_{\text{rxn}} < 0$ . Based on this information, we expect that for standard conditions

- a) the reaction will always be spontaneous
- b) the reaction will never be spontaneous
- D** c) the reaction will be spontaneous at high temperatures, but not at low temperatures
- d) the reaction will be spontaneous at low temperatures, but not at high temperatures
- e) cannot tell from the information given in the problem

**Part 2. Short answer.**

1) Define the following terms [4 points each]

colloid

A suspension of small particles within a solvent.

miscible

Refers to two (or more) liquids that will homogeneously mix to form a solution in any proportion.

state function

A function whose change in value depends only on the initial and final state of a system, and is independent of the pathway used.

sublimation

The phase transition solid  $\rightarrow$  gas

2) Give the following [4 points each]

a) The formation reaction for chlorobenzene ( $\text{C}_6\text{H}_5\text{Cl}(\ell)$ ).

b) The Third Law of thermodynamics

The absolute entropy of one mole of a pure substance in the form of a perfect crystal is  $0.00 \text{ J/mol}\cdot\text{K}$  at absolute zero.

3) A solution is prepared by dissolving 1.200 g of potassium iodide (KI, MW = 166.0 g/mol) in 25.00 g water (H<sub>2</sub>O, MW = 18.0 g/mol). What is the freezing point for the solution? Note that K<sub>f</sub> = 1.86 kg•°C/mol, and that the normal freezing point for pure water is T<sub>f</sub> = 0.00 °C. [10 points]

$$\text{moles KI} = 1.200 \text{ g} \frac{1 \text{ mol}}{166.0 \text{ g}} = 0.007229 \text{ mol KI} \quad \text{Since KI(s)} \rightarrow \text{K}^{\text{+}}(\text{aq}) + \text{I}^{\text{-}}(\text{aq})$$

$$\text{molality of particles} = \frac{0.007229 \text{ mol KI}}{0.02500 \text{ g water}} \frac{2 \text{ mol particles}}{1 \text{ mol KI}} = 0.5783 \text{ mol/kg}$$

$$\Delta T_f = K_f m_B = (1.86 \text{ kg}\cdot\text{°C/mol}) (0.5783 \text{ mol/kg}) = 1.08 \text{ °C}$$

Since freezing point is lower for a solution than for a pure liquid, the freezing point for the solution is

$$T_f = 0.00 \text{ °C} - 1.08 \text{ °C} = -1.08 \text{ °C}$$

4) The vapor pressure of a particular pure liquid is p = 48.2 torr at T = 20.0 °C, and p = 247. torr at T = 50.0 °C. What is the numerical value for ΔH°<sub>vap</sub>, the enthalpy of vaporization, for the liquid? [10 points]

$$\ln(p_2/p_1) = -(\Delta H^\circ_{\text{vap}}/R) \{ (1/T_2) - (1/T_1) \}$$

$$\text{So} \quad \Delta H^\circ_{\text{vap}} = - \frac{R \ln(p_2/p_1)}{\{ (1/T_2) - (1/T_1) \}}$$

$$= - \frac{(8.314 \text{ J/mol}\cdot\text{K}) \ln(247./48.2)}{\{ (1/323.2 \text{ K}) - (1/293.2 \text{ K}) \}} = 42900. \text{ J/mol} = 42.9 \text{ kJ/mol}$$

**Part 3. Problems.**

1) A solution is prepared by dissolving 48.43 g of potassium bromide (KBr, MW = 119.01 g/mol) in water (H<sub>2</sub>O, MW = 18.02 g/mol) to form a solution with final volume and density V = 500.0 mL and D = 1.068 g/mL. What are the molarity of KBr in the solution and the mole fraction of KBr in the solution? [16 points]

$$\text{grams KBr} = 48.43 \text{ g} \qquad \text{mol KBr} = 48.43 \text{ g} \frac{1 \text{ mol}}{119.01 \text{ g}} = 0.407 \text{ mol}$$

$$\text{grams solution} = 500.0 \text{ mL} \frac{1.068 \text{ g}}{\text{mL}} = 534. \text{ g soln}$$

$$\text{grams H}_2\text{O} = 534. \text{ g soln} - 48.43 \text{ g KBr} = 485.6 \text{ g H}_2\text{O} \qquad \text{mol H}_2\text{O} = 485.6 \text{ g} \frac{1 \text{ mol}}{18.02 \text{ g}} = 26.95 \text{ mol}$$

$$\text{molarity} = \frac{\text{mol solute}}{\text{L soln}} = \frac{0.407 \text{ mol}}{0.5000 \text{ L}} = 0.814 \text{ mol/L}$$

$$\text{mole fraction KBr} = \frac{\text{mol KBr}}{\text{mol KBr} + \text{mol H}_2\text{O}} = \frac{0.407 \text{ mol}}{(0.407 + 26.95) \text{ mol}} = 0.0149$$

2) Thermodynamic data are given below (at T = 25.0 °C and p = 1.00 atm) and may be of use in doing this problem.

Substance	$\Delta H^\circ_f$ (kJ/mol)	$\Delta G^\circ_f$ (kJ/mol)	$S^\circ$ (J/mol·K)
N <sub>2</sub> (g)	0.0	0.0	191.5
NO(g)	90.4	86.7	210.6
N <sub>2</sub> O(g)	81.6	103.6	220.0

a) What are the numerical values for  $\Delta H^\circ_{\text{rxn}}$  and  $\Delta S^\circ_{\text{rxn}}$  for the process [8 points]

$$\Delta H^\circ_{\text{rxn}} = [ \Delta H^\circ_f(\text{N}_2(\text{g})) + 2 \Delta H^\circ_f(\text{NO}(\text{g})) ] - [ 2 \Delta H^\circ_f(\text{N}_2\text{O}(\text{g})) ]$$

$$= [ 0.00 + 2 (90.4) ] - [ 2 (81.6) ] = + 17.6 \text{ kJ/mol}$$

$$\Delta S^\circ_{\text{rxn}} = [ S^\circ(\text{N}_2(\text{g})) + 2 S^\circ(\text{NO}(\text{g})) ] - [ 2 S^\circ(\text{N}_2\text{O}(\text{g})) ]$$

$$= [ 191.5 + 2 (210.6) ] - [ 2 (220.0) ] = + 172.7 \text{ J/mol}\cdot\text{K}$$

b) What is the numerical value for  $\Delta S^\circ_{\text{univ}}$  for the above process? [8 points]

$$\Delta S^\circ_{\text{sys}} = \Delta S^\circ_{\text{rxn}} = + 172.7 \text{ J/mol}\cdot\text{K}$$

$$\Delta S^\circ_{\text{surr}} = - \frac{\Delta H^\circ_{\text{rxn}}}{T} = - \frac{17600. \text{ J/mol}}{298. \text{ K}} = - 59.1 \text{ J/mol}\cdot\text{K}$$

$$\Delta S^\circ_{\text{univ}} = \Delta S^\circ_{\text{sys}} + \Delta S^\circ_{\text{surr}} = + 172.7 \text{ J/mol}\cdot\text{K} + (- 59.1 \text{ J/mol}\cdot\text{K}) = + 113.6 \text{ J/mol}\cdot\text{K}$$
